

Prince George Forklift Training Schools

Prince George Forklift Training Schools - Have An Efficient And Safe Work Area With Our Forklift Training Schools

If you are searching for a job as an operator of a forklift, our regulatory-compliant lift truck training Schools provide excellent instruction in various styles and types of forklifts, lessons on pre-shift inspection, fuel types and handling of fuels, and safe utilization of a lift truck. Practical, hands-on training assists those participating in obtaining essential operational skills. Course content comprises current rules governing the utilization of lift trucks. Our proven forklift courses are intended to provide training on these kinds of trucks: narrow isle forklift, counterbalanced forklift and powered pallet truck.

Do not raise or lower the fork whilst the lift truck is moving. A load should not extend over the backrest due to the risk of the load sliding back in the direction of the operator. Inspect for overhead obstructions and make certain there is adequate clearance prior to lifting a load. Stay away from overhead power lines. Once the load is raised straight up, tilt it back slightly.

The lift truck is less stable when a load is in a raised position. Make certain that no body ever walks below the elevated fork. The operator must never leave the lift truck when the load is raised.

While handling pallets, forks must be level and high enough to go into the pallet and extend all the way under the load. The fork's width should provide even distribution of weight.

Set the brakes and chock the wheels before loading and unloading the truck. The floors should be strong enough to support the combined weight of the load and the forklift. Fixed jacks can be installed to support a semi-trailer which is not attached to a tractor. The height of the entrance door must clear the forklift height by at least 5 cm. Mark edges of ramps, docks or rail cars and avoid them.
