

Prince George Boom Lift Training

Prince George Boom Lift Training - Aerial platforms or elevated work platforms are devices which enable workers to perform tasks and duties at elevated heights that would not be otherwise reachable. There are many aerial lifts on the market to carry out different applications under different site conditions. If not carefully operated, elevated work platforms could result in serious injury or death. The most common reasons for related accidents are falls, electrocution, tip-overs and crushed body parts. Lift operators must be fully trained in techniques to avoid accidents while operating lifts.

Aerial Lift Safety course is intended for individuals who must operate the devices more safely and effectively. The course provides thorough instruction on the most used lifting devices in the industry.. Types of lift covered consist of boom supported, scissor and articulating aerial lifts. The video presents the right techniques operators must follow. Instruction focuses on protection against falls, pre-operational inspection, stability of the device and safe driving procedures.

The course addresses employee safety and equipment reliability. All instructional materials are compliant with provincial, state and Government agency regulations and requirements. Course management and training methods would be taught. The trainer would likewise become well versed in the technical aspects of aerial lift safety.

Both practical training and classroom training are components of the Aerial Platform/Boom Truck Training course. Both sessions should be successfully completed for the participant to receive a certificate of achievement.

The self-propelled boom-supported elevating work platforms are different from the self-propelled elevating work platforms in that they are able to position their work platforms totally beyond the base of the machine. The theoretical training part is almost the same for both types. The practical part of the training could be finished faster if just one kind of machinery is utilized.

Elevating Work Platform Training Program Objectives:

For the safe operation of Boom-Type Elevating Work Platforms and Self-Propelled Elevating Work Platforms, boom lift training would help operators use their equipment more efficiently and would reduce the chances of accidents in the workplace. Trainees would review of business policies and applicable rules, talk about Due Diligence, study Criminal Negligence and consequences to trainers, employers, workers and supervisors. Participants would study equipment features, operating procedures, stability, fueling/charging procedures and parking. Site-specific safety concerns would be dealt with.
